- /// Bangers / Noise generators
- /// Smoke bombs
- /// Anti-hail and rain rockets
- /// Document destruction
- /// Fireworks

SALUTING

FOR CEREMONIAL
PURPOSES

“AL-KHALEEJ” OR “BARBARA”

This is our largest most impressive and most decorative gun. The design can be adapted to individual customer requirements. The barrel can be manufactured in various colours and can be mounted on a steel or decorated timber gun carriage with steel/rubber or wooden wheels, depending on requirements.

It is even possible to engrave elaborate logos into the barrel or on to the gun carriage.

**Our cannons
and cartridges
are a unison of
design, tradition
and quality.**

**SALUTING
GUNS**

M635

The M635 is a gun type which was already in use during the Second World War. Built as an exact replica of the original, this gun is a reliable partner for traditional gun salutes.

IN VARIOUS CALIBRES AND DEGREES OF LOUDNESS

We also manufacture the corresponding saluting munitions for our guns. The customer has the choice of four calibres and two different shell casing materials: brass or aluminium.

Depending on the use, a higher or lower sound pressure level may be required (see fact sheet). Our saluting munition fires **smokelessly**, which is a great advantage in the maintenance of the

gun. In addition, the shooting place does not become smoke-logged after firing multiple shots. But we are also able to produce munitions with smoke – even **coloured smoke**.

The saluting cartridges can be manufactured in **hazardous goods class 1.4C**.

This means that they can even be transported in cargo aircraft.
